

## Tackle challenges of climate change #MRDataThon – A DataThon by Munich Re

Munich, 17–19 November 2017

The consequences of climate change are diverse and are impacting the insurance industry. Physical changes resulting from regional shifts in weather patterns are one of the consequences of great relevance to reinsurance. It is clear that the situation is grave not only for scientists and politicians, but that massive challenges resulting from climate change are ahead for the insurance industry as well.

Do you have exceptional skills for analysing data and a huge appetite for discovering answers and predicting results hidden in that data? Are you someone who wants to take a dive in our data lake and tackle the challenges of climate change? If you are, join us for an exciting two-day Datathon hosted at our LAB in Munich. By having exclusive access to a set for climate data, we want you to look for new ideas in predicting the effects of climate change. The concrete challenge will be given at the start of the Datathon event.
